PREFACE

Commodities reported in this summary are outlined in Table of Contents shown below. Shipments shown in detailed tables are rail shipments, including RAIL-TRUCK (piggy-back), moving on initial line-haul waybills, except where the word "Boat" or "BT" is shown directly after the State of origin. The latter are boat shipments of domestic production which moved truck-to-boat. Domestic truck shipments and imports are identified and reported where information was available.

Mixed cars containing 90 per cent or more of one commodity were reported under the name of that commodity. When no single commodity comprised as much as 90 per cent, the cars were classified in their proper mixed category; for example, mixed citrus fruit, mixed vegetables. Some divergence from this 90 per cent rule may be expected in view of the large number of transportation employees preparing the reports.

The following abbreviations were used to identify California shipments by districts: ND - Northern District; CD - Central District; SD - Southern District; IV - Imperial Valley.

Factors used for converting domestic truck movement and all imports are outlined on page 3. These factors have been in effect since January 1, 1950. Revision will be made effective January 1, 1960 and at ten year intervals thereafter. There has been a tendency toward heavier rail loadings during recent years. The railroads have established incentive rates by reducing the per hundredweight cost,observing heavier carlot minima, or prescribed flat carlot maximum rates. Therefore, allowances must be made when comparing rail and truck data published herein.

Boat shipments of Oregon and Washington apples, pears, onions and potatoes are included in truck shipments shown in tables.

Imports reported herein were taken from official records of the U. S. Department of Commerce. Segregation of Mexican imports as between Eastern and Western Mexico origins was not possible because the official data were recorded in total imports of each commodity.

Truck shipments, expressed in carlot equivalents, are included where information was available. The Arizona truck shipments represent only interstate movement. California truck shipments shown as "Passings" represent interstate movement; "Unloads" represent receipts of California production at Los Angeles, Oakland and San Francisco markets. There were 6026 carlot equivalents of various California vegetables reported in these interstate truck passings for 1958 that were not identified by commodity. These "other vegetables" were mostly spinach, turnips, green onions, squash, beans, peppers, radishes and other items not specifically identified in commodity tables. Florida truck shipments represent interstate movement plus shipments from the peninsula area to West Florida. Texas truck shipments largely represent movement from the Rio Grande Valley.

Cooperation on the part of railroad, express and steamship agents, and officials of State Departments of Agriculture and farmers' markets in furnishing information, as well as members of the produce industry in furnishing records of motortruck movement, is hereby gratefully acknowledged.
